

Table 1. DRAFT blank template; no measurements. Planned rendering comparison on RPNG, UTMM, and Aria at a matched absolute training-render budget. Held-out PSNR, SSIM, LPIPS, and checkpoint Gaussian counts will be aggregated from the same sequence records as the appendix. The proposed recipe, budget, and evaluation cohort remain to be locked.

^{VI}: RGB+IMU; ^R: RGB only. ^C: conditional monocular+IMU MM3DGS-SLAM adapter, pending verification without sensor depth. — = unmeasured. No cell is a reported result. Valid paired cohort n/N =—/— for every dataset and method. Dataset means will give equal weight to scene means; no failed or missing scene has been silently excluded.
