

Table 1. DRAFT blank template; no measurements. Planned geometry comparison with VIGS-SLAM and the proposed mapper with and without the final geometry objective. Scene/reference selection, distance units, F-score threshold, extraction rule, and visibility mask are pending. Accuracy and completeness distances must use an independent reference; held-out RGB quality and map size will be reported beside free-space error.

Dataset / scene	Method	Completeness		F-score $\uparrow$	Free-space		#G (k)
		Accuracy $\downarrow$	$\downarrow$		error $\downarrow$	PSNR $\uparrow$	
—	VIGS-SLAM	—	—	—	—	—	—
—	Ours w/o geometry	—	—	—	—	—	—
—	Ours with geometry	—	—	—	—	—	—

— = unmeasured. These are reserved cells, including unknown scene identities. Unsupported independent-reference metrics must later be marked NA; training depth or PSNR alone will not establish geometric correctness.
